

JUSTICE COMMITTEE AGENDA
Law and Justice Center, Room 700
March 3, 2003

5:15 P.M.

1. Roll Call
2. Chairman's Approval of Minutes – February 3, 2003
3. Appearance by Members of the Public
4. Departmental Matters:
 - A. Beth C. Kimmerling, Coroner's Office
 - 1) Items to be presented for Information:
 - a) Monthly Report for January 2003 1
 - b) General Report
 - c) Other
 - B. Sandra Parker, Circuit Clerk
 - 1) Items to be presented for Information:
 - a) Monthly Statistical Report 2 -10
 - b) General Report
 - c) Other
 - C. Billie Larkin, Children's Advocacy Center
 - 1) Items to be presented for Information:
 - a) Monthly Statistics Report 11
 - b) General Report
 - c) Other

- D. Joan Naour, Correctional Health Services
- 1) Items to be presented for Information:
- a) McLean County Detention Facility
Health Services Department
2002 Year End Report 12 - 14
 - b) General Report
 - c) Other
- E. Roxanne Castleman, Court Services
- 1) Items to be presented for Information:
- a) Report on Pre-Trial Release,
Electronic Monitoring, and Other
Diversion Programs 15 - 42
 - b) Statistical Reports for January 2003 43 - 48
 - c) General Report
 - d) Other
- F. Bill Gamblin, E-911/ETSB
- 1) Items to be presented for Information:
- a) Monthly Statistics 49 - 53
 - b) General Report
 - c) Other
- G. Amy Davis, Public Defender
- 1) Items to be presented for Information:
- a) Monthly Caseload Report 54 - 56
 - b) General Report
 - c) Other
- H. Bill Yoder, State's Attorney
- 1) Items to be presented for Information:
- a) Case Load Report 57
 - b) Asset Forfeiture Report 58
 - c) General Report
 - d) Other
- I. Sheriff David Owens, Sheriff's Department
- 1) Items to be presented for Information:
- a) McLean County Detention Facility
Population Report 59 - 62
 - b) McLean County Sheriff's Department
2002 Annual Report 63 - 99
 - c) General Report
 - d) Other
- J. John M. Zeunik, County Administrator
- 1) Items to be presented for Information:
- a) General Report
 - b) Other

5. Other Business and Communication
6. Recommend payment of Bills and Transfers, if any, to County Board
7. Adjournment

To: Jail Alternatives Workgroup
From: Terry Lindberg, Assistant County Administrator
Re: Cost Data for Electronic Monitoring Program

We worked with Court Services Director Roxanne Castleman to develop some cost estimates for an Electronic Monitoring Program. We relied upon information obtained from prospective vendors and data contained in the publication entitled "Offender Supervision with Electronic Technology" (American Probation and Parole Association - 2002).

Electronic Monitoring (EM) has been implemented in other jurisdictions both on a pre-trial basis and as a post-trial sentencing alternative. Although most of our discussion in McLean county has focused on pre-trial, we recommend strong consideration be given to using EM on a post-trial basis.

Exhibit I, entitled "INCARCERATION COSTS" uses national reference data to estimate the cost of maintaining 40 inmates in jail for varying average lengths of stay. Earlier analyses of EM program costs have compared incarceration cost data to EM cost data in an attempt to demonstrate potential savings. We have separated incarceration costs from EM costs because the savings for incarceration costs occur only if new inmates are not brought in to fill the beds made available by diverting existing inmates to an EM program.

Exhibit II, "McLean County Inmates," provides an example of inmates currently sentenced to periodic imprisonment and work release. We have run this custom IJIS query on several different dates to determine how many inmates might be available to be diverted into a post-trial EM program. We make no judgements about which inmates might or might not be appropriate for EM as opposed to Periodic Imprisonment.

Exhibit III, "ELECTRONIC MONITORING COSTS," estimates the costs for an Electronic Monitoring program for 20 inmates. It is based on committing four (4) Probation Officers to the function. Other jurisdictions have used correctional officers from the Sheriff's Department (particularly if the program is post-trial), or para-professionals at a lower job grade than a Probation Officer.

These comments and exhibits represent a starting point for further discussion, and are not intended to be recommendations or conclusions.

EXHIBIT I INCARCERATION COSTS

Potential Eligibles for
Pre-trial Release -- 40

40 Offenders X 30 Days
20 Offenders X 60 Days
10 Offenders X 90 Days

1,200 Days Incarceration/Supervision
1,200 Days Incarceration/Supervision
900 Days of Incarceration/Supervision
3,300 Total Days of Incarceration

Cost of Incarceration @ \$56.46/day

\$ 186,318

From: Gretchen Grabowski, Intern
Re: Jail Population Analysis System

At the request of Public Defender Amy Davis, and based on the model proposed in an article by Robert C. Cushman entitled, "Preventing Jail Crowding: A Practical Guide (May 2002). I am working with the County Administrator's Office and the IJIS data base administrators John Jongky and Jianhi Sun to develop a new Jail Daily Population Report that may be useful in managing jail populations.

The current reporting format reports total daily populations, broken down by several categories, and references those totals to the total jail capacity. The model we are developing will consider three primary factors:

- 1) Daily Bookings
- 2) Daily Departures
- 3) Average Length of Stay

As noted in the Cushman article, it is important to analyze all the factors that impact on jail population, and daily headcount is not sufficient to explain many of the changing circumstances that affect population. The authors point out that the jail manager (Sheriff Owens) may not be in a position to control many of the variables, and the "gatekeeper function" alone cannot control jail population.

For example, even if Daily bookings is increasing, if, at the same time, Average Length of Stay is increasing, there will be a resulting negative impact on overall jail population.

We believe there is sufficient data available through IJIS to produce a report based on the above model. I plan to have a draft report with actual live data available within the next two weeks. The Administrator's Office will circulate the draft report to all the involved parties, and I will be happy to respond to questions and recommendations for improvements.

Attached for your information and discussion is a sample jail population report format from the Cushman article, a monthly population report from the Sheriff's Office which summarizes the period from January 2002 through December 2002, and a list of data elements we pulled from the IJIS data base. I am also doing a statistical analysis of the correlation between the factors listed on the Sheriff's population report to determine if there are any reliable predictors of jail crowding.

Understanding the Sources of Jail Crowding

Try to visualize a line graph: one line sloping downward, the other sloping upward. The first line represents the decline in offenses reported to local law enforcement, and the other represents the growing number of people in the county jail. The graph illustrates the divergence of two trends.

We all agree that the number of people in jail is a consequence of the level of criminal activity taking place in the community. But that does not fully explain the situation in jurisdictions where measures of the level of crime have been declining, yet the jail population continues to increase.

In these jurisdictions, the increased number of people in jail is also a consequence of changes in the response of officials who operate the local justice system: local law enforcement, prosecutors, probation and parole officers, and judges.

These changes can be thought of as changes in justice policies and practices. They may be stated or unstated, obvious or subtle. Empirically, they show up as changes in decisionmaking. These changes in decisionmaking can be detected at key justice system decision points that mark the passage of an individual or a case through the justice system process (e.g., at the decision to arrest and the decision to place an arrestee in detention, case filing, or sentencing).

Although they work independently, as these officials make decisions at these key justice system decision points they collectively operate the levers and controls that regulate the size of the jail population. Note that the changing policies and practices of these officials lie mostly outside jail operations. The sheriff, or the jail administrator, has little control over who goes into jail, how long people stay there, or how they get out.

Understanding the Dynamics That Create Changes in Jail Occupancy Levels

Preventing and/or managing crowding requires a basic understanding of the jail population dynamics that determine how many people are in a jail. This understanding comes from examination of a basic jail population analysis formula that shows the admission rate and inmate length of stay determine the number of people in jail:

Number of admissions x average length of stay =
number of jail days required.

Two additional calculations may be derived from this basic formula:

Number of jail bed days required ÷ 365 days per year =
average daily jail population.

Total number of jail days required ÷ number of admissions =
average length of jail stay.*

Changes in the number of admissions or length of inmate stay will change the number of people in jail on any given day. A jail crowding crisis can result if both increase at the same time.

An example will help illustrate this important formula. Let us say that, on average, 10 people are admitted to a hypothetical local jail each day, and the average length of inmate stay is 15.0 days. As we start this exercise, the midnight inmate count at the end of the day on January 10 confirms that 100 people are in jail.

Consider the following scenarios.

Scenario 1: Stable state

If 10 people are admitted to jail on January 11 and exactly 10 people are released on January 11, the midnight inmate count at the end of January 11 will remain the same as it was at the end of January 10. This stable

* This calculation will best represent the average length of stay if the number of releases roughly approximates the number of admissions.

state will occur if the number of admissions exactly matches the number of releases. The jail occupancy level will remain unchanged as a result.

Scenario 2: Admissions increase

If 20 people are admitted to jail (10 more than normal) and only the usual 10 people are released, there will be 110 people in jail at the end of the day on January 11. This is an increase of 10 inmates. It is easy to see how more admissions can increase the number of people in jail and eventually produce jail crowding.

Scenario 3: Length-of-stay increase

If 10 people are admitted to jail on January 11 and only 1 person is released that day, the total inmate count will swell to 109 inmates. The number of admissions did not change, but fewer people were released than usual. Fewer releases *always* mean that inmates are staying longer than before. This scenario shows how longer inmate stays will increase the number of people in jail. (Conversely, shorter stays will work to reduce the number of people in jail.)

The length of inmate stay is a very important, but less understood, determinant of the number of people in any jail. Many jail administrators can quickly produce detailed information about their number of admissions, often with additional details about arresting agency, charges, and so forth. Yet, it is much harder to find jail administrators who can produce length-of-stay information for these same classes of prisoners.

Scenario 4: Both change

What happens when scenario 2 and scenario 3 combine—in other words, when there is an increase in admissions *and* an increase in the length of inmate stay? Using our example, we can see that the increase in admissions would produce 10 additional inmates at the end of the day. Furthermore, the increase in the inmate length of jail stay would produce nine additional inmates. As a result, the total inmate count would swell from 100 to 119 inmates (10 from an increase in admissions and 9 from an increase in the

inmate length of stay). Thus, the most difficult situation, from a jail population management perspective, is when *both* the numbers of admissions and the inmate length of stay are increasing. This is when the jail population will increase most rapidly.

Explaining Swings in Jail Occupancy Levels

It is precisely in these times of crisis that the sheriff and/or the jail administrator will be expected to answer some basic questions: Who is in jail? Why has the jail population been increasing? Why is the jail crowded? Typically, the people responsible for answering these questions do not do a very good job. This is because they simply do not have sufficient information to do so. Difficulty in answering even simple questions can undermine public confidence in the ability of the jail administrator and/or sheriff to understand and manage the situation.

It isn't that they are not trying. The interaction of the admission and length-of-stay variables can be complicated. These interactions are not easy to understand. Many computerized jail information systems seem to be unable to create the kinds of reports that are needed. And, if done manually, time is needed to pull the booking jackets, collect the data by hand, analyze the data, and prepare a report. Even then, the report may contain insufficient information to answer some of the questions that will be asked. For example, it may not contain information that will confirm or discredit some of the hypotheses (guesses) others will set forth to explain changes in jail population levels. Thus, the analysts must return to the data, conduct additional analyses, and repeat the process.

By the time a written report can be presented, additional changes in admission and release rates may be taking place. The situation keeps changing. Analysts are always shooting at a moving target. It is difficult to create a clear picture of the situation. Rather, the process seems to go in circles. This can gradually erode confidence in the department's ability

to analyze the situation. As a consequence, there is little enthusiasm for proposed courses of action because too many people are unsure that these are the appropriate remedies. The result is inaction.

Fortunately, there is an alternative.

A Jail Population Analysis System

It is possible for any jail to set up a data collection and analysis system that will describe these changes in admissions and lengths of stay, show how they combine, and explain why and how the jail population is rising and falling. Essential and optional data elements that could produce a very basic jail population analysis are listed below.

Essential data elements include the following:

- Person identifier (number unique to the person).
- Booking event number (number to identify the jail admission).
- Sex (identification of gender).
- Booking date (date inmate was admitted to the jail).
- Booking time (military time inmate was admitted).
- Release date (date inmate was released from jail).
- Release time (military time inmate was released).
- Release type (bail, release on recognizance, acquittal, escape, etc.).

Optional data elements include the following:

- Arresting agency (agency making arrest; not transport).
- Sentence status (sentenced on all charges, partial, none).
- Offense level (felony, misdemeanor, infraction, etc.).
- Court jurisdiction (court of jurisdiction).

These data should be collected on every person in the jail at a specific date and time (e.g., at a midnight inmate count). Thereafter, the same data should be collected for anyone who enters or leaves the jail. The data for each inmate would appear as a row on a spreadsheet or in a database. Conceptually, it is like creating a checkbook where the checkbook

balance represents the daily population count, the deposits represent admissions, and the checks written represent releases: it is a crude equivalent of a Quicken-type program for corrections.

Every jail keeps some sort of record of jail admissions and releases. This means that every jail already has the basic data needed to begin building a jail population analysis system. No additional data may be needed.

Data collection starts with recording the date, time, and identifying information for every person who enters or leaves the jail. Normally, additional information also will be available from records kept at the jail or in the local information system. For example, admission records may identify the arresting agency, the arresting agency charges, and so forth. And, in addition to release date and time, there may be some record of the type of release (e.g., bail bond, release on recognizance, dismissal, or acquittal in court).

Using only the data elements labeled "essential" on page 5, a jail administrator could begin with the jail population on January 1, 2001, and show how changes in the number of admissions and/or length of stay added to or subtracted from the population over the following months. This would permit the jail administrator to determine how much of the change was due to an increase in admissions and how much was due to a change in the average length of inmate stay.

If additional details are also in the database (see the data elements labeled "optional" on page 5, the administrator could "drill down" into the database to analyze components of the jail population. This will help determine whether the change can be attributed to some subset of inmates. For example, is the change concentrated in male inmates or female inmates, in inmates being arrested by a particular agency or for a particular offense, or in inmates who are being processed in a particular court?

The example report on page 7 displays partial results of such an analysis for inmates in custody on a given day. Monthly reports of this type can be compared to show changes in jail composition. Similar tables can be

Example Report of Jail Utilization and Occupancy

Sentence Status	Number of Inmates	Percentage of Inmates	Hours in Custody	Percentage of Hours	Average Stay (in hours)
Felony sentenced	156	26.5	370,865	26.8	2,377
Felony unsentenced	184	31.2	847,229	53.0	4,605

Misdemeanor sentenced	125	21.2	111,898	7.0	895
Other sentenced	4	0.6	15,985	0.1	3,996
Other unsentenced	1	0.2	4,150	0.3	4,150
Totals	589	100.0	1,598,546	100.0	2,714
Offense Levels					
Felony	340	57.7	1,218,094	76.2	3,583
Misdemeanor	244	41.4	360,317	22.5	1,477
Other	5	0.8	20,134	1.2	4,027
Totals	589	100.0	1,598,546	100.0	2,714

created to show changes in bookings and/or releases over various time periods. The report format essentially will be the same.

Some jails do not have automated recordkeeping systems. Fortunately, these tables can be constructed using manually maintained booking and release logs as source information. The data first must be entered into a desktop computer and then can be analyzed with commonly available, widely used spreadsheet programs.

Where this information is already in a computer, the task is to set up a daily download of existing data. No new data collection should be necessary.

Modeling jail population management options

Once this basic jail population analysis capability is established, it can be used to begin modeling the results of hypothetical or actual changes in admissions or lengths of stay. Hypothetical changes may be labeled "defensive," as in the case of a crowded jail that seeks to find ways to reduce the size of the inmate population. Or, changes may be labeled "proactive." For example, officials may seek to make more effective use of jail bed space by deliberately changing the composition of the jail population to keep some people longer and move lesser offenders to other corrections options.

We begin with an example to illustrate how a defensive-type change would work:

Let us assume that our hypothetical jail has 100 inmates and that the jail is full at the start of our exercise. This would mean that the public protection resource available to the community is 100 beds \times 365 days a year or 36,500 jail bed days. This figure (36,500 jail bed days) represents the available public protection resource.

If the average length of inmate stay is 15.0 days, then 2,433 inmates can be housed during the year (36,500 jail bed days \div 15.0 average days' stay = 2,433 inmates). The bed space requirement would change if either the number of admissions or the length of stay were reduced. For example, let's say both the number of admissions and the length of stay could be reduced by 10 percent.

How would a 10-percent reduction in both the numbers of admissions and the length of inmate stay affect the inmate count? The results of the exercise are as follows:

- Reduction in number of admissions: (10 percent of 2,433 inmates housed during the year = 243 inmates) \times 15.0 average days' stay = 3,645 jail bed days. This translates into a bed saving of 10 beds (3,645 jail days \div 365 days = 9.98 beds).

- Reduction in inmate stays: (10 percent of 15.0 days = 1.5 days). This reduces the average length of inmate stay from 15.0 to 13.5 days, which translates into a bed savings of 10 beds (1.5 days' stay x 2,433 inmates = 3,650 fewer jail bed days). And 3,650 fewer jail bed days divided by 365 days per year = 10 beds.

The combined result can be estimated as follows:

- Previous number of inmates that could be housed 2,433
- 10-percent reduction in admissions -243
- New number of admissions (90 percent of previous) 2,190
- New length of stay = 13.5 days. A 13.5-day inmate stay x 2,190 inmates = 29,565 jail bed days, divided by 365 days in the year = jail population of 81 inmates. This means the jail population would be reduced to 81 inmates versus 100 inmates before these reductions.

Reducing the Inmate Population in a Crowded Jail

Our example also illustrates how officials might reduce the number of inmates in a crowded jail. Suppose a local jail has only 81 beds but is crowded and has an average daily population of 100. The previous example shows how the inmate population can be reduced to 81 inmates through the achievement and continuous management of a 10-percent reduction in admissions and average length of stay.

Policy Choices

Any actual implementation of this idea would not use an arbitrary 10-percent reduction for either admissions or length of inmate stay. Analysis of the type and source of admissions and types of jail releases should inform action. Each situation will be different. Some jurisdictions may find more possibilities to manage the admission rate but may

find fewer possibilities for managing the length of stay. Other jurisdictions may discover just the opposite.

Some jurisdictions might want to incapacitate fewer inmates but increase the length of stay of more serious cases. This would be an example of a proactive strategy. To do this, they would reduce the number of admissions and increase the length of stay. The total number of jail bed days might remain unchanged yet produce improved public protection.

Other jurisdictions might seek to achieve improved public protection by doing just the opposite (that is, by increasing the number of admissions but reducing the average length of jail stay). They may or may not wish to change the total number of jail bed days that are being provided.

These are only a few examples of how a jail population analysis capability might be put to work first to prevent and then to better manage jail population occupancy levels in a city or county jail. These are all examples of jail population *management*, a responsibility that springs from the belief that jail bed space needs to be managed in a way that maximizes community protection. In too many jails, the size or composition of the jail population is not determined by deliberate, well-thought-out, coordinated decisionmaking. The jail population is left to seek its own level.

The Key to Preventing Crowding

The key to preventing crowding, and to managing the jail population, is to continuously collect, monitor, and analyze admission and length-of-stay information, then to share the results with other justice officials and with officials in leadership positions in general government. Their cooperation will be essential. Collectively, they control the policies and practices that determine jail admissions and length of stay. As noted earlier, these levers and mechanisms lie outside the control of the jail administrator and/or the sheriff.

For this reason, the sheriff and the jail administrator have a stake in forming a justice system-wide criminal justice coordinating committee (CJCC), or in strengthening an existing CJCC that is not operating well. This is a forum at which the sheriff can demonstrate that potential or actual jail crowding is a justice system dysfunction: it is not simply "the sheriff's problem." (For more information, see *Guidelines for Developing a Criminal Justice Coordinating Committee* by Robert C. Cushman.)

These officials have a large stake in ensuring the jail bed resource is best used to maximize public protection. When they are presented with clear and convincing empirical evidence, they will do what they can to modify their policies and practices. Jail administrators and/or sheriffs can exert a great deal of influence on the decisionmaking of these other agencies. But they can do so only if they have the facts, if they can competently answer questions about how the jail population is changing, and if they can clearly demonstrate how changes in admission rates or lengths of stay can improve the administration of justice. (More information is provided in the resources listed below.)

This approach will also serve the community well when it is time to build a new jail. Officials will be more informed and more supportive. They will be able to help the community understand that jail bed space is being used wisely. The general public will not support efforts to expand jail bed space until it is convinced that all potential excess has been squeezed out of the existing operation.

COURT SERVICES ADULT/JUVENILE DIVISION STATISTICS

ADULT DIVISION

7 Officer Supervision Unit - 3 Officer PSI Unit

Total Caseload – 1117 (1024 last month)

Average caseload per officer 160 (60 AOIC recommendation)

Presentence Reports Completed – 29 (40 last month)

* Total Workload Hours Needed – 2131.75 (1906.50 last month)

** Total Hours Available - 1650.00

* According to AOIC standards it would take this amount of hours per month to complete all requirements of case supervision and report writing.

** The number of work hours available to the division (11 officers working 150 hours each per month).

AOIC workload standards indicate **an additional 3.21 adult officers are needed.** (1.71 last month)

JUVENILE DIVISION

4 Officer Division

Total Caseload – 122 (119 last month)

Average caseload per officer 31 (35 AOIC recommendation)

Social History Reports Completed – 10 (22 last month)

* Total Workload Hours Needed – 489.50 (624.50 last month)

** Total Hours Available 600.00

* According to AOIC standards it would take this amount of hours per month to complete all requirements of case supervision and report writing.

** The number of work hours available to the division (4 officers working 150 hours each per month).

AOIC workload standards indicate **an additional .08 juvenile officers are needed.** (0.16 last month)

EARLY INTERVENTION PROBATION (EIP)

3 Person unit with a maximum caseload of 45

Total caseload 33

SPECIAL PROGRAMS

INTENSIVE PROBATION UNIT ADULT

3 person unit with a maximum caseload of 40

Total Caseload – 30 (32 last month)

INTENSIVE PROBATION UNIT JUVENILE

1 ½ person unit with a maximum caseload of 15

Total Caseload – 16 (17 last month)

DRIVING UNDER THE INFLUENCE UNIT

1 person unit with a maximum caseload of 40

Total Caseload - 89 (89 last month)

JUVENILE INTAKE

2 person unit

Total Informal Conferences - 16 (27 last month)

Total Caseload Informal Probation – 22 (13 last month)

Total Intake Screen Reports – 50 (57 last month)

To: Honorable Dennis Powell and Honorable Members of the ETSB
Cc: File
From: W.H. Gamblin, E9-1-1 Administrator 
RE: January 2003 Resolution Report

Attached is the January 2003 Resolution Report. As you can see we are down to about 169 errors.

The Chairman has pointed out the last several meeting about the errors in Saybrook. This arises due to the fact that these lines are located within the Verizon Central Office located within the city of Saybrook. The CO is located on an alley with houses surrounding it and we have written to Saybrook several times to give the alley a name and address the Verizon Building. We will be attending the next city meeting to speak with the mayor. Until the address is provided we will continue to show these as errors.

Re: Monthly Caseload - MONTH ENDING JANUARY 31, 2003

Dear Committee Members:

Pursuant to statute, I am forwarding this report to your attention and I am causing a copy to be filed with the Circuit Clerk's office of McLean County.

During the above-mentioned time period, in the discharge of our duties to indigent persons in McLean County we have been assigned the following new cases in the area set forth. The activities in which we are involved differ in no substantial manner from those which have earlier been reported.

CASE TYPES	MONTHLY TOTALS 2002	MONTHLY TOTALS 2003	YTD TOTALS 2002	YTD TOTALS 2003	% CHANGE YTD

FROM: Sheriff David Owens
SUBJ: MARCH 3RD, 2003 JUSTICE COMMITTEE MEETING

Dear Chairman Renner:

I would respectfully request that the following two (2) items be placed on the March 3rd, Justice Committee Agenda for information only.

Information

- 1) **McLean County Detention Facility Population Report:** (Please see attached).
- 2) **McLean County Sheriff's Department 2002 Annual Report.** (Please see attached).

I plan on attending this meeting and will address any questions you or members of the Committee may have.

Respectfully,

David Owens
Sheriff

Criminal Investigations:

The Criminal Investigations Division of the McLean County Sheriff's Office investigated 611 crimes in 2002. This was an increase of 24 % (121) from 2001.

**202 cases of Domestic Violence
28 Criminal Damage to Property
17 Fire Investigations
75 Burglaries
23 Sexual Assault**

Major Incidents:

June of 2002, Lexington High School Fire Investigation

- ✓ **Joint investigation with the Normal Police Department solved 12 cases for this office and 30 cases for the Normal Police Dept. Cases solved in rural McLean County included Burglaries at Tri Valley High School, Criminal Damage to Property cases and two Arsons.**
- ✓ **Four individuals were arrested for an Arson at the Funk's Grove Nature Center.**
- ✓ **With the arrest of one individual a string of daytime residential Burglaries and Forgeries were cleared. This arrest also solved a number of crimes that occurred in Tazewell County.**
- ✓ **With the arrest of another individual, a list of daytime residential Burglaries were solved for this office and a number of Bloomington Police Dept. cases were also solved.**
- ✓ **Homicide conviction of Charlie Evans for a Murder committed in 2001 near Downs.**

In September of 2002, Det. Zoeller was assigned part time to the U.S. Marshall's Office Violent Offender Task Force. Det. Zoeller was sworn in as a Special Deputy United State Marshall. He coordinates efforts with police agencies throughout the state and nation to apprehend violent and dangerous wanted criminals.

Det. Vickie Scheafer continued to obtain specialized training in the area of Arson investigations. She has become a major asset in dealing with Arson investigations in rural McLean County.

D.A.R.E. Program:

Deputy Jim O'Shea continues to provide this valuable drug education program to 12 McLean County Schools. The CORE program served 495 fifth and sixth grade students. The following program served an additional 153 students and the pre-core program served approximately 1,500 K through 4th grade students.

DOMESTIC VIOLENT UNIT:

The McLean County Sheriff's Office's Domestic Violence Unit investigated 202 cases in 2002. Out of these cases 104 involved a battery and 3 involved aggravated batteries. This will be the last full year of a multiple year grant for the Domestic Violence Unit. The two Deputies assigned have been a valuable resource for this agency and many of our rural agencies. The Federal Funding for this unit expires at the end of April 2003. These two deputies will fill two vacancies with the Sheriff's Office when the grant runs out. They will return to duties within the Patrol Division. Their work will have to be shared by Patrol Deputies and Investigators from the Criminal Investigations Unit. Local funding was not available to continue this program.

COURT SECURITY:

Prisoner transports increased by 9% over 2001. A five year average indicates an 11 % increase from 1998 to 2002.

Warrant service increased by 14 % in 2002 over 2001. A five year average indicates a 45 % increase from 1998 to 2002.

SUPPORT SERVICES 2002 :

- **Maintain over 200 computer devices within the McLean County Sheriff's Office.**
- **Successfully implemented a major upgrade to the E*Justice System.**
- **Worked on the statewide NIBRS Committee, (National Incident Based Reporting System). This is a system that all law enforcement agencies in the United States will ultimately be required to report their crime and arrest date to in the near future.**
- **Finalized mobile data issues for the new system along with testing new radio system options.**
- **Provide information to all areas of the Sheriff's Office as a tool for our managers.**
- **Provided graphs and other information for the annual report.**

PATROL DIVISION 2002:

- **Overall crime (all crimes) decreased 3.64 % in 2002 as compared to 2001.**
- **UCR (Serious Crimes) increased by 1 %.**
- **UCR crime arrests decreased by 9.5 %.**
- **Total traffic citations were up by .58 %**
- **DUI arrests were up 21.4 %**
- **Total traffic accidents decreased by 10.5 %.**
- **Fatal Traffic Accidents increased by 800 % (9)**
- **Personal Injury traffic accidents increased by 11.6 %**

- **Citizens complaints against road deputies were down by 75 % Only 1 complaint was filed in 2002.**

Adopt-A-Town:

Six Deputies were assigned as Adopt-A-Town Deputies. They patrol and assist 11 rural McLean County Communities who have no police department or limited police services. Community policing effort to build communications and trust with the public and the Sheriff's Office.
